Geoengineering plasma/light analysis: How we die

Former FBI Chief, Ted L. Gunderson, made a statement regarding his knowledge of chemical "death dumps" on January 12, 2011:

> "The death dumps, otherwise known as chemical trails, are being dropped and sprayed throughout the United States and England, Scotland, Ireland, and Northern Europe. I have personally seen them not only in the United States, but in Mexico and in Canada. Birds are dying around the world. Fish are dying by the hundreds of thousands around the world. This is genocide. This is poison. This is murder by the United Nations. This element within our society that is doing this must be stopped. I happen to know of two of the locations where the airplanes are that dump this crap on us. Four of the planes are out of the Air National Guard in Lincoln, Nebraska. And, the other planes are out of Fort Sill, Oklahoma. I personally have observed the planes that were standing still in Nebraska - Lincoln, Nebraska - at the Air National Guard. They have no markings on them. They are huge, bomber-like airplanes with no markings. This is a crime: a crime against humanity, a crime against America, a crime against the citizens of this great country. The must be stopped. WHAT IS WRONG WITH CONGRESS? This has an affect on their population, and their people, and their friends, and their relatives, and themselves. What's wrong with them? What's wrong with the pilots who are flying these airplanes and dumping this crap, this poison, on their own families? Somebody has to do something about it. Somebody in Congress has to step forward and stop it now. Thank you. I'm Ted Gunderson."

I watch them murder her, the precious Earth is being sprayed with chemicals and coal fly ash, desiccants and flammable metals such as aluminum and iron, the ingredients in thermite, as well as strontium and barium which are also flammable metals. You may see the test results of a **pan of fresh water left out for a week**, now loaded with micron size and sub micron sized materials from coal fly ash, so toxic and drying, so very toxic, sprayed as a coating over all my land and woods, now within the plant tissues themselves as well as those of my own body.

Notes and Definitions

QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to matrix interference. The LCS and/or LCSD were within acceptance limits showing that the laboratory is in control and the data is acceptable.
J	Detected but below the Reporting Limit; therefore, result is an estimated concentration (CLP J-Flag). The J flag is equivalent to the DNQ Estimated Concentration flag.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the detection limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
<	Less than reporting limit
≤	Less than or equal to reporting limit
>	Greater than reporting limit
≥	Greater than or equal to reporting limit
MDL	Method Detection Limit
RL/ML	Minimum Level of Quantitation
MCL/AL	Maxium Contaminant Level/Action Level
mg/kg	Results reported as wet weight
TTLC	Total Threshold Limit Concentration
STLC	Soluble Threshold Limit Concentration
TCLP	Toxicity Characteristic Leachate Procedure
Note 1	Received Temperature - according to EPA guidelines, samples for most chemistry methods should be held at ≤6 degrees C after collection, including during transportation, unless the time from sampling to delivery is <2 hours. Regulating agencies may invalidate results if temperature requirements are not met.
Note 2	According to 40 CFR Part 136 Table II, the following tests should be analyzed in the field within 15 minutes of sampling: pH, chlorine, dissolved oxygen, and sulfite.

All but the inane know this poison is not applied to ameliorate effects caused by CO2 or any other laughable thing, the spray and microwave/RF clouds exist to cover weapon system related radiation; geo-weaponry is now in play and the plasma/sunlight interactions create intense UV radiation, destroying life and stratospheric ozone, all at a single idiotic cruelty which spells cash and war…the marks of Authority.

The scientists are puzzled to see the ozone damage. I write them and explain.

> Dear Dr. Ball:
>
> I am deeply concerned to read your recent paper, and may be able to help piece together the missing threads concerning the ozone damage revealed.
>
> In:
> **Evidence for a continuous decline in lower stratospheric ozone offsetting ozone layer recovery, Ball et al.** Atmos. Chem. Phys., 18, 1379-1394, 2018
> https://doi.org/10.5194/acp-18-1379-2018
> https://www.atmos-chem-phys.net/18/1379/2018/acp-18-1379-2018.html
>
> You state: "The reasons for the continued reduction of lower stratospheric ozone

are not clear; models do not reproduce these trends, and thus the causes now urgently need to be established."

Those models are missing a key factor. Please see the attached. This is of the utmost importance. Please do read with care, and request any additional information needed. The damage must be stopped.

Thank you,

Rich Norman

The spray and ozone interactions sent to Dr. Ball, and early patents of weapons designs which use **field line trapped plasma** are to be found here:

https://www.researchgate.net/publication/326450117_Geoengineering_an_unacknowledged_source_of_ozone_damage_metallic_pollution_and_neurodegeneration

The missing and oft ignored piece of how we will die, is the plasma light interactions and their UV intensifying effects. As it turns out, *the entire visible spectrum can be turned to UV with plasma*, creating a cloaking type technology for visible objects. I had first received confirmation of this seemingly evident effect of light UV increase via plasma interactions from an optical physicist and friend. The effect is in this case is emanating from sun shining through field line trapped plasma.

From Dr. Santilli's list of discoveries, for which he was recently given a knighthood by the Italian president:

4.15. VERIFICATIONS VIA NEW FORMS OF INVISIBILITY. Santilli's isoblueshift (Section 4.6) allows a new form of invisibility achieved by a craft surrounded by a plasma of such temperature to shift visible light to ultraviolet frequencies.

> "One intriguing aspect of the barrier is that the innermost extent of the energetic electrons seems to correspond closely to the outermost extent of a persistent Earth-shrouding "bubble" of strong, lowfrequency, electromagnetic radiation

> detected by the Van Allen Probes. Those very low frequency (VLF) electromagnetic waves result from atmospheric lightning, leak through the ionosphere, and ***energize the charged particles that are entrained along magnetic field lines around the planet***. ***But the highest proportion of wave energy in the VLF bubble appears to emanate from ground-based transmitters that communicate with submarines***." Emphasis added.

VLF energizes weaponized field line trapped plasma, it feeds the weapons systems. VLF as well as the weapons systems it feeds must be terminated at once!

We may theoretically put the pieces of the deadly deception together, and place the missing factor into plain view. We theorize:

1. The weapons systems were turned on and the relativistic electrons placed over head act as a refractive medium which adds UV intensity to the incoming sunlight (causing ozone destruction), and alters sun coloration to the current manifest white.

2. The optically thin cloud formations also created begin heating effects (see the ozone document above and read the Russian reference). Please note how sun coloration shift is the first effect seen, the early effect. That leads to hyper UV creation, and hence, ozone destruction. The CO2 hypothesis is then pumped to conceal emerging thermal effects from the NATO weapons.

3. Next, the situation is allowed to build and UV shifts are noted; the ratios of UVB/UVA increase, indicating ozone damage and plasma/light intensification of UV spectrum ionizing radiation. Now, cloud creation and optical qualities of atmospheric layers are adjusted with metals and H2SO4 and no one notices, so on we go.

4. In a few years, the sun is more as a welder's spark, more electrons mean more UV, less ozone, and necessitate more spray.

5. Now, the process accelerates and we have the 'impossible,' **UVC is now on ground**, with X-rays presumably next in line to allow in (via ozone depletion) and the weapon is stronger still, implying more damage from many fronts (see document above concerning odd H and odd N and other effects). Note: according to Wikipedia: "UV-C, which is very harmful to all living things, is entirely screened out by a combination of dioxygen (< 200 nm) and ozone (> about 200 nm) by around 35 kilometres (115,000 ft) altitude."

They will soon need many fires and much smoke to block the UV and other radiations, and well let's be honest, perhaps a volcano or two would not hurt?

So we are irradiated then sprayed, dried out and stoked to burn as radiation increases, and understand…*how we die*.
